

Please consider the topic of BPL carefully and do not fall prey to the lobbying of large companies.

BPL would operate as an unlicensed radio service and would cause undue interference in those frequency ranges. In addition, if not carefully regulated, BPL could cause significant interference to government users of shortwave radio frequencies.

Due to the fact that BPL makes use of low-power signals, interference from these signals could propagate around the globe.

Is the monetary gain of a select few (i.e., the companies pushing for BPL) more important than the rights of the masses?

In summary, interference is pollution. The range of radio frequencies available to unlicensed radio services is a limited resource. Thus please do not let BPL damage this set of resources.
